

lower your “in-place” costs

Marking Services Canada Ltd.

Marking Services offers identification products and value-added services that effectively and efficiently reduce in-place costs for electrical marking projects in healthcare, government, public safety, education, and telecommunications facilities. Working directly with electrical contractors and facility owners of all sizes, MSC provides a single source for all electrical marking needs. MSC frees contractors to do what they do best; knowing that the electrical identification, conduit marking and switch plate part of the job is cost-effectively managed. MSC manufactures custom electrical identification products that make information highly visible, install faster and significantly reduce your labor costs. These include conduit markers that clearly communicate voltage, circuits, destination and source of electrical systems, signage that identifies hazards and location of safety equipment and wire tags that provide long-term protection to workers or plant infrastructure. Through our value added services and high quality products, we significantly raise the level of safety awareness, promote safe work conditions and **reduce your “in-place” costs.**

MARKING • TAGGING • SIGNAGE

take-off service

2-4 weeks

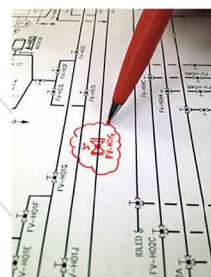

The Value of MSC's Take-Off Service

-  **SAVES TIME** for the Project Manager by creating a list of markers, tags and plates
 - MSC's in-house engineers use project drawings and specifications to determine accurate material counts for your electrical identification products
-  **SAVES MONEY** installation is efficient and accurate!
 - Allows for quantity pricing
 - Products are packaged by area reducing the manpower required for implementation
-  **ENSURES ACCURACY** Prevents over/under-ordering of electrical identification products
 - Offers a seamless process from Take-Off to material installation
-  **IT'S FREE** It doesn't get much better than this. At MSC we value our customer's loyalty and offer our Take-Off service at no additional cost!

What MSC needs from you

-  **A SET OF DRAWINGS** that includes the information necessary for the Take-off (Power, Lighting, One-Lines, Lead Sheets, Panel Schedules)
-  The appropriate **ELECTRICAL SPECIFICATION**
-  Approximate material **DELIVERY DATE** or installation schedule

This information can be supplied to MSC either electronically, via disk or uploaded to a private ShareFile folder. Simply send an email to electricaltakeoffservice@markserv.com. A link to the folder will be returned from MSC at which time the upload may begin.

How much time is needed for a Take-Off

-  MSC needs 2-4 weeks to complete the Take-Off
-  Take-Off requirements can be submitted to MSC at any time throughout the project (allowing for the 2-4 week minimum)

What you get...

-  For Wall Plates
 - Excel workbooks for all switch plates in scope. Details in the workbook include:
 - Pack-by method
 - Drawing number
 - Room number
 - Panel number
 - Circuit number
 - Plate description
 - Quantity
 - Text Color
 - Any other pertinent plate information
-  For Other Electrical Identification Products
 - Take-Off editing worksheet and summary of editing instructions that includes all information for the identification materials requested in take-off.

submittals

take advantage of our easy submittal service

MSC knows that part of your contract with customers requires you to provide submittal documents for all the products you supply. As a service to you, MSC will prepare submittal documents that will meet your customer's requirements. Give us your spec; we'll prepare a detailed submittal package that includes custom or stock electrical identification and equipment labeling product technical data sheets and samples.

Labeling products are ordered and delivered within the construction schedule, so as not to delay any activities. MSC's detailed documents streamline the submittal process, allowing contractors to obtain approval for equipment labels and tags needed for the electrical identification portion of the project.

pack-by service

we make it easy for you

Making labeling a cost-effective part of your business entails managing installation expenses. To help reduce in-place costs, MSC offers special packaging services for your electrical identification order at no additional expense.

- Once your marking products are manufactured, we'll presort them prior to shipping in the way that makes the most sense for you to install. MSC packages marking products by building, floor, and/or area so they can be installed systematically throughout the facility.
- MSC's pack-by service eliminates the labor hours your workers would normally spend sorting electrical identification labels, conduit markers and switch plates on site. Instead, they can take the boxes to the designated sections and begin installation without delay.

This methodical process ensures quick and efficient equipment label, conduit marker and electrical switch plate installation.

mscsales@markserv.com

Our professional sales staff is experienced in working with specifications and recommending product solutions. We produce a wide variety of innovative products affording our customers many options for meeting their electrical labeling requirements. Through our commitment to providing value-added services, high-quality products and on-time delivery, MSC offers you a one-stop, comprehensive source for all your electrical identification needs.
