# AIM SERVICES

## AIM SERVICES — THE PAIN-FREE PATH TO BUILDING YOUR MOBILE DOCUMENT LIBRARY.

### Documentation Process Flow

The AIM Services team works with you to identify, digitize and integrate your existing documents to provide a smooth and efficient flow into a mobile document library.

### Asset Identification

MSC puts 30 years of labeling experience to work for you, developing a standardized identification program that provides QR code access to the information in your mobile document library.

### On Site Staffing

Our AIM Services staff will work at your facility. We work independently and professionally to execute the buildout of the mobile document library, freeing your staff to complete their normal work assignments.

### Mobile App and Database Portal

The AIM mobile application works in conjunction with the asset identification, providing access to your MDL via a mobile device directly at the asset.

### Asset Inventory Validation

Validating your asset inventory list and verifying asset identification maintains the integrity of your documentation process.

### Offsite Support

Your AIM Services onsite contact has a dedicated global support team behind them. In addition, we provide ongoing 24/7 AIM Services technical support.

### Training

Your AIM Services contact will provide onsite interactive training and will later be available for remote assistance.
